Atty. Docket No.: P67430US0

## IN THE ABSTRACT:

--In the system an An access member for use in catheterization (1) is provided, said access member having an outer end (1a) and an inner end (1b). The access member, which is adapted to extend from the outside of the body through a the canal which may be an artificial canal extending from the user's abdominal wall (2) to the bladder (3) and into the bladder, and has at least one cavity extending substantially throughout the length of the access member. The walls of the access member are made from a flexible material such that the cavity is generally kept closed by the mutual contact of the walls while allowing for intermittent insertion of a catheter.--
